

THE ARIZONA HOMEOWNER'S GUIDE TO HEATING SYSTEMS

PRO SOLUTIONS
AIR CONDITIONING
AND HEATING

Stay Warm, Safe & Comfortable All Winter Long

In Arizona, we may not have harsh winters, but chilly nights and cold snaps can make a reliable heating system essential for your comfort and safety. Understanding how your heating system works—and how to care for it—can help you avoid breakdowns, lower your energy bills, and extend the life of your equipment.

Here's everything every Arizona homeowner should know about heating.

DID YOU KNOW?

Regular heating maintenance can improve efficiency by up to **20%** and help your system last years longer.

TYPES OF HEATING SYSTEMS

Most Arizona homes use one of the following heating systems:

GAS FURNACE

The most common and affordable option. Heats air and distributes it through your ductwork.

HEAT PUMP

Provides both heating and cooling. Moves heat instead of generating it.

ELECTRIC FURNACE

Uses electric heating elements to warm your home. Best for homes without gas.

Not sure which system is right for you? We can help you choose the best option for your home and budget!

SIGNS YOUR HEATING SYSTEM NEEDS SERVICE

Don't wait for a complete breakdown. Call us if you notice:

- ✓ Uneven heating or cold spots
- ✓ Weak airflow from vents
- ✓ Strange noises (banging, rattling, squealing)
- ✓ System cycles on and off frequently
- ✓ Higher utility bills
- ✓ Yellow pilot light (instead of blue)
- ✓ Dry air or increased dust
- ✓ Thermostat not responding
- ✓ System takes too long to warm the home

MAXIMIZE COMFORT & EFFICIENCY

Set It Right

68°–70° is ideal in the winter. Lower it at night or when away.

Seal & Insulate

Proper insulation and sealed ducts keep warm air in and help save energy.

Use the Sun

Open blinds during the day to let natural sunlight warm your home.

Maintain Humidity

Use a humidifier if your home feels too dry in the winter.

REPAIR OR REPLACE?

Consider replacing your system if:

- ✓ It's over 12–15 years old
- ✓ Repairs are becoming frequent
- ✓ Your energy bills keep rising
- ✓ Some rooms never feel warm
- ✓ The system uses outdated parts
- ✓ You want improved comfort and efficiency

A new, high-efficiency system can lower your energy bills and come with a warranty for peace of mind!

HEATING MAINTENANCE TIPS

A little maintenance goes a long way!

CHANGE YOUR FILTER

Replace every 1–3 months to keep airflow strong and your system efficient.

KEEP VENTS CLEAR

Make sure furniture, rugs, and curtains aren't blocking airflow.

CHECK YOUR THERMOSTAT

Replace batteries annually and ensure it's working properly.

KEEP THE AREA CLEAN

Keep the area around your furnace or heat pump free from dust and clutter.

SCHEDULE ANNUAL PROFESSIONAL MAINTENANCE

We'll inspect, clean, and tune your system so it's ready when you need it.

SCHEDULE YOUR HOME COMFORT INSPECTION TODAY!
